Slot Die for narrow width
FOR HOT MELT AND REACTIVE HOT MELT ADHESIVES
CONTINUOUS AND INTERMITTENT APPLICATIONS
HIP-MITSU coating heads model SMF and SM30, available width up to 1.000 mm, are designed for continuous and intermittent applications of hot melt and reactive hot melt adhesives.

SMF and SM30 guarantee in all conditions of use a clean cut-off at high operating speed.

SMF and SM30 can also use adhesives with viscosity range from 300 up to 120.000 mPas.

The design of the coating head allows a wide range of applications.

The temperature control is electronically managed.

Hardened materials allow applications in contact with the substrate also at high operating speeds.

The changing of coating width and pattern can be obtained using different shim plates, as indicated, or full automatically.
